

Slides 3.4: Heredity, Environment, and Who I Am Becoming, and the Lifespan Stages Quiz

Slide outline for Lesson 3.4, two days. Slides 1 to 12 are Day 1. Slides 13 to 22 are Day 2: the Lifespan Lightning review game and the quiz. The influences map is private; slide 8 says so and Sal says so twice.

Slide 1: Heredity, Environment, and Who I Am Becoming

- Lesson 3.4, Day 1: Growing Across the Lifespan
- Unit 3: Growing Up, Getting Along
- Do now: Heredity means what you were born with. Environment means everything around you. Write H, E, or both: (1) your eye color, (2) how good you are at math, (3) whether you like spicy food Notes: Hands for each. Eye color gets H. Math and spicy food split the room. That split is the lesson.

Slide 2: Most of you is “both”

- Eye color: born with it
- Math: born with some of it; the rest is who taught you and how often you practiced
- Spicy food: born with a tongue; the kitchen you grew up in did the rest
- Today: how much of you is which, and who did it Image: a plain figure with two arrows pointing in, one labeled “heredity” and one labeled “environment.”

Slide 3: Heredity

- Passed from your biological parents through genes
- Your height range
- Eye and hair color
- Some health risks (allergies run in families)
- Some of your temperament (the raw material of shy or outgoing) Image: a simple family tree with three generations, no names. Notes: Students copy the definition onto Part 1.

Slide 4: Environment

- Everything and everyone around you since birth
- Family, home, food, sleep
- School, friends, language, neighborhood
- Screens, money, luck
- Everything on yesterday’s list of what a child needs Notes: Students copy the definition.

Slide 5: The honest part

- Almost every trait is both

- Height: inherited range; food and sleep decide where in the range you land
- Temperament: inherited; the people around you teach you what to do with it
- Your first language: born able to learn any language; got the one in the house Notes: The first language example fixes the “everything is heredity” mistake fastest. Use it again in the check.

Slide 6: The everyday sort

- Ten items on Part 1. Pairs. H, E, or B
- Eye color, height, your accent, being ticklish, liking a certain music
- Being shy or outgoing, being good at drawing, your first language, a food allergy, how you handle losing
- Write a reason for three. 8 minutes Notes: Grade 6 does six items.

Slide 7: The reveal

- H: eye color
- E: accent, first language, how you handle losing (mostly), liking a certain music (mostly)
- B: height, ticklish, shy or outgoing, good at drawing, a food allergy
- If you had a good reason for a different letter, keep it and write the reason Notes: Thumbs: up for eight or more. Whiteboard: “H, E, or B for ‘your first language?’” E is the got-it answer.

Slide 8: My influences map

- A circle in the middle: me
- Three rings: people, places, things
- At least eight influences. No names; use roles (“a coach,” “my aunt”)
- Label each with the aspect it shaped most: P, E, S, I
- Star the three biggest
- This page is yours. It goes in your folder. Nobody reads it unless you want them to Image: the blank map from the handout. Notes: Say the privacy line now and again when you collect Part 3.

Slide 9: A fictional example

- People: a coach (P), a grandmother (S), a fourth-grade teacher (I)
- Places: a kitchen (S), a basketball court (P), a library (I)
- Things: a bike (P), a language (I), a phone (E)
- Stars: the grandmother, the court, the language Notes: This is a made-up map. Model how a role replaces a name.

Slide 10: Build yours

- 13 minutes
- If the rings are too small, use the table on the handout
- Grade 6 and IEP/504: at least five

- When you are done: which one influence has done the most to make you who you are?
Notes: Circulate to check for eight entries and letters, not content.

Slide 11: Share by choice, then Part 3

- Anyone want to share one influence and one aspect? No names
- Then Part 3: the biggest one. Three sentences: what it is (a role), what aspect it shaped, why it beat the other two stars
- Part 3 is the only thing I collect Notes: Take three volunteers. Sentence starter: "The biggest influence on me is ___ because ___."

Slide 12: Exit card and tomorrow

- 3 things about you that are mostly environment
- 2 that are mostly heredity
- 1 influence you want more of next year
- Tomorrow: Lifespan Lightning, then the Lifespan Stages Quiz (15 minutes, 12 items, no notes) Notes: Two students read their "1" by choice.

Slide 13: Day 2: Lifespan Lightning and the quiz

- Do now: write the seven stages in order without looking. Then write what object permanence means
- Then: four rounds of Lifespan Lightning, teams of four, one whiteboard each
- Then: the quiz, last 15 minutes Notes: Put the board timeline up after they write.

Slide 14: How Lifespan Lightning works

- Draw a card or hear a question. Write the answer on the whiteboard. Hold it up at "boards up"
- One point per right board
- Anything half the room misses, we fix right then
- Four rounds: stages, milestones, myth or fact, heredity or environment Notes: Score on the board. Keep it moving; 17 minutes for four rounds.

Slide 15: Round 1: stages (the 21 cards)

- A card is read aloud (described in words)
- Write the stage
- Six cards, one per team turn Notes: Use the close-call cards (8, 13, 15, 20) on purpose.

Slide 16: Round 2: milestones

- Most babies sit without help at about ___ months
- Most babies walk at about ___ months
- A baby searches for a hidden toy at about ___ months. What is that called?
- Two-word sentences arrive at about ___ years
- Pretend play starts at about ___ years

- A 10-month-old cries when a parent leaves the room. Good sign or bad sign? Notes: Answers: 6; 12 to 15; 8 to 12, object permanence; 2; 2 to 3; good sign.

Slide 17: Round 3: myth or fact

- Teenagers need less sleep than younger children
- The braking part of the brain keeps building into the mid 20s
- Mood swings usually mean something is wrong
- Everyone the same age should be at the same point
- Risks feel bigger and more exciting now than they will later
- Taking risks is always bad Notes: M, F, M, M, F, M.

Slide 18: Round 4: heredity or environment

- Eye color
- Your accent
- Height
- Your first language
- Being shy or outgoing
- Two siblings, same house, different personalities: possible or impossible? Notes: H, E, B, E, B, possible (different friends, birth order, treatment, choices).

Slide 19: Fix-it minute

- Anything half the room missed goes here
- *[Sal: leave blank; fill from the game]* Notes: Thirty seconds per fix. Then the quiz.

Slide 20: The quiz

- Desks clear. Influences map in the folder
- 12 items. 15 minutes. No notes
- Word banks are on the page
- Item 12 uses a card described in words
- Fill the exit line at the bottom before you hand it in Notes: Read the directions aloud. Start the timer.

Slide 21: Accommodations reminder (for the teacher; not shown)

- Read aloud on request
- Item 12 may be answered orally
- Extended time into tomorrow's do now, or the quiet room
- Bilingual dictionary allowed Notes: Hide this slide when presenting.

Slide 22: Next week

- Topic 3.2: self-concept, friends, and stress
- Bring the influences map. It comes back
- Nothing about you gets shared out loud unless you choose Notes: Say this after the quiz is collected, in the last minute.
