

Slides 4.2: Home Safety Hunt and Emergency Plans

Slide outline for Lesson 4.2. Fourteen slides, one day. The six room slides are the review slides before the Home Safety and Conservation Quiz. *[Sal: photos of real rooms with the hazards circled work better than drawings; stage them at home or use the FACS room.]*

Slide 1: Home Safety Hunt

- Lesson 4.2
- Today: hazards by room, the two detectors every home needs, and a plan for the night something goes wrong
- Poison Control: 1-800-222-1222 (this stays on the board all unit) Image: a two-story house at dusk with one window lit.

Slide 2: Do now

- Where is the smoke detector closest to where you sleep?
- “I do not know” counts as an answer
- When was it last tested?
- Two minutes Notes: Hand vote on both. The “I do not know” count is your pre-assessment. Then the fact: about three in five home fire deaths are in homes with no working smoke alarm. *[Sal: confirm the current NFPA number.]*

Slide 3: Kitchen

- Pot handles turned out
- A towel or paper near the burner
- Knives in the sink
- Cleaners and medicines where a child can reach Image: a kitchen with a pot handle sticking out over the edge, a towel on the oven door, and an open cabinet under the sink; each hazard circled. Notes: Students fill the kitchen row in Part 1. Remind them: this was Lesson 1.1, same eyes, new room.

Slide 4: Bathroom

- Wet tile floor, a mat with no rubber back
- No grab bar in the tub
- A hair dryer plugged in near water
- Medicine in reach Image: a bathroom with a hair dryer on the sink edge, a bath mat, and an open medicine cabinet; each hazard circled. Notes: Introduce GFCI outlet in one sentence: the outlet with the two buttons, made to shut off near water. Not tested.

Slide 5: Stairs

- Anything on the steps
- A loose rug at the top
- No railing

- Dark Image: a staircase with a shoe basket on the bottom step, no railing, and a rug at the top with a curled corner. Notes: Ask: who falls on stairs most? Answer: the youngest and the oldest. Both live in the house you get today.

Slide 6: Bedroom

- A space heater within three feet of the bed or a curtain
- Cords under the rug
- A candle
- A window that does not open, or a crib under a window Image: a bedroom with a space heater a foot from a hanging blanket, and a cord running under a rug. Notes: Three feet is the rule for anything that heats.

Slide 7: Garage and outside

- Gasoline near a water heater or any flame
- A car running with the garage door closed (carbon monoxide)
- A ladder left standing
- A pool with no fence or gate; ice on the steps Image: a garage with a red gas can beside a water heater, and a car inside with the door down. Notes: This slide sets up the CO detector on Slide 8 and the hazard nobody finds in the hunt.

Slide 8: The two detectors

- Smoke detector: every level of the home and every sleeping area; test monthly; new battery yearly; replace at ten years
- Carbon monoxide (CO) detector: near the sleeping areas; CO has no smell and no color
- A chirp once a minute means the battery is low. It is not a bug. Image: a round smoke detector and a plug-in CO detector, side by side, with the test buttons marked. Notes: Pass both detectors around. Press test once. Find the date on the back.

Slide 9: Cords, outlets, poisons

- One plug per outlet; a power strip is not a wall
- No cords under rugs or through doorways
- A space heater always plugs straight into the wall, alone
- Poisons and medicines: up high and locked; Poison Control 1-800-222-1222 Image: a power strip with six plugs and a space heater cord in it, with a red X.

Slide 10: The hunt

- Teams of three
- Read the Delacroix-Nwosu home: a mother, a toddler (age 2), a grandmother (age 74, uses a cane)
- Highlight every hazard, then table it: room, type, one fix
- Fifteen are hidden
- Twelve minutes Notes: Answer no questions about whether something counts. Circulate with the clipboard checklist.

Slide 11: A plan has three parts

- Two ways out of every bedroom: a door and a window, or two doors
- One meeting spot outside that everyone can reach; never the driveway, where the fire trucks park
- Who to call: 911, Poison Control, one trusted adult outside the house Image: a simple floor plan with two arrows leaving each bedroom and a star at a mailbox. Notes: Ask before they start: how does the grandmother get down the stairs? Who carries the toddler? Both go in the plan.

Slide 12: Make the plan

- Fill Part 3 for the Delacroix-Nwosu family
- Draw the exits on your floor plan sketch
- One sentence: why your meeting spot works for a grandmother with a cane
- Eight minutes Notes: Common weak answer: “the front yard.” Push for a fixed object.

Slide 13: Debrief

- One reporter per team: the worst hazard for the toddler, and the worst for the grandmother
- The ones nobody found
- Two teams: where is your meeting spot and why Notes: Reveal the running car in the closed garage last. It is the reason CO detectors go inside the house, near the bedrooms.

Slide 14: Exit card

- 3 hazards from the home you found today
- 2 parts of a family emergency plan
- 1 thing in your own home you want to check tonight (no address, no names) Notes: Three students read line 3. Sort before the next period.
