

## Handout 5.1: Match the Clothing to the Situation

Name: \_\_\_\_\_ Date: \_\_\_\_\_ Period: \_\_\_\_\_

**Directions:** Fill in Part 1 during the slides. Fill in Part 2 during the walk to the front table. Take this sheet with you to the five cards around the room for Part 3, one minute at each card. Finish Part 4 during the class discussion.

### Word bank in other languages

*[Check with a native speaker before printing.]*

| English         | Turkish           | Portuguese           | Spanish              |
|-----------------|-------------------|----------------------|----------------------|
| clothing        | giysi (kıyafet)   | roupa                | ropa                 |

### Part 1: The four jobs of clothing

Write one example of your own for each job. Not the one from the slide.

| The job             | What it means in your own words | My example |
|---------------------|---------------------------------|------------|
| 1. Protect the body |                                 |            |
| 2. Fit the activity |                                 |            |
| 3. Fit the setting  |                                 |            |
| 4. Say something    |                                 |            |

## Part 2: The protective clothing walk

Fill this in as each item is held up.

| Item                       | What it protects | What could happen without it | Where it is required |
|----------------------------|------------------|------------------------------|----------------------|
| Apron                      |                  |                              |                      |
| Oven mitt                  |                  |                              |                      |
| Hair tied back or hair net |                  |                              |                      |
| Closed-toe shoes           |                  |                              |                      |
| Safety glasses or goggles  |                  |                              |                      |
| Work glove                 |                  |                              |                      |
| High-visibility vest       |                  |                              |                      |
| Bike helmet                |                  |                              |                      |

One sentence: which one of these will you be required to wear in this room, and why?

### Part 3: Match the clothing to the situation

One minute at each card. Write an outfit head to toe, then finish the reason sentence.

#### Card 1: A job interview

At a restaurant. You are applying to be a host. It is 10 in the morning, 72 degrees.

| Head | Body | Legs | Feet |
|------|------|------|------|
|      |      |      |      |

This works because the weather is \_\_\_\_\_, the activity is \_\_\_\_\_, and the setting is \_\_\_\_\_.

#### Card 2: A construction site

You are visiting your cousin's work site for one hour. There is dust, noise, and things overhead.

| Head | Body | Legs | Feet |
|------|------|------|------|
|      |      |      |      |

This works because the weather is \_\_\_\_\_, the activity is \_\_\_\_\_, and the setting is \_\_\_\_\_.

#### Card 3: A wedding

Your family is invited. It is outdoors in June, 84 degrees, on grass.

| Head | Body | Legs | Feet |
|------|------|------|------|
|      |      |      |      |

This works because the weather is \_\_\_\_\_, the activity is \_\_\_\_\_, and the setting is \_\_\_\_\_.

#### Card 4: A soccer game

You are playing, not watching. It is 68 degrees and the field is wet.

| Head | Body | Legs | Feet |
|------|------|------|------|
|      |      |      |      |

This works because the weather is \_\_\_\_\_, the activity is \_\_\_\_\_, and the setting is \_\_\_\_\_.

### Card 5: A cold walk to school

It is 34 degrees, windy, and there is a chance of rain. The walk is 15 minutes.

| Head | Body | Legs | Feet |
|------|------|------|------|
|      |      |      |      |

This works because the weather is \_\_\_\_\_, the activity is \_\_\_\_\_, and the setting is \_\_\_\_\_.

### Part 4: Dress codes, what they protect and what they cost

Three real rules. Check every box that applies, then write the two sentences.

| The rule                                                                     | Safety                   | Sanitation               | Image                    | Team identity            |
|------------------------------------------------------------------------------|--------------------------|--------------------------|--------------------------|--------------------------|
| A restaurant kitchen: closed-toe non-slip shoes, hair back, no loose jewelry | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| A hospital: scrubs, no long nails, no rings in a sterile room                | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| This school's dress code (read it off the slide)                             | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |

Pick one of the three rules. Write the rule you picked: \_\_\_\_\_

What the rule protects: \_\_\_\_\_

What the rule costs the person who has to follow it: \_\_\_\_\_

### Exit card (tear off or write on an index card)

1. One piece of protective clothing you will wear in this room next week, and what it protects:

2. The situation from today where your first outfit was wrong, and what you changed:

3. One question you still have about clothing rules:

## Teacher key

Part 1 and Part 2 have many right answers. Score them complete, partial, or missing. The four jobs must all be filled in with a matching example; the example that students copy from the slide instead of writing their own is the one to push back on.

### Part 2, the expected answers:

| Item                       | What it protects                                 | Without it                                                                                              | Where required                                                |
|----------------------------|--------------------------------------------------|---------------------------------------------------------------------------------------------------------|---------------------------------------------------------------|
| Apron                      | Clothing from spills, stains, and heat           | Ruined clothes, hot liquid soaking through to skin                                                      | Kitchens, labs, art rooms, this room                          |
| Oven mitt                  | Hands and wrists from burns                      | A burn from a pan, a rack, or steam. A wet mitt is worse than no mitt, because steam goes right through | Any kitchen                                                   |
| Hair tied back or hair net | Food from hair, and hair from machines and flame | Hair in food, hair caught in a mixer, hair in a flame                                                   | Kitchens, food service, shops, labs                           |
| Closed-toe shoes           | Feet from dropped, spilled, and sharp things     | A dropped pan, a dropped iron, a dropped pair of shears, hot liquid on the foot                         | Kitchens, shops, hospitals, construction, this room           |
| Safety glasses or goggles  | Eyes from splashes and flying pieces             | Chemical in the eye, a fragment in the eye                                                              | Science labs, shops, construction                             |
| Work glove                 | Hands from cuts, splinters, and rough material   | Cuts and splinters. Also note: you cannot do fine work in one                                           | Construction, landscaping, warehouses                         |
| High-visibility vest       | The worker, by making them visible               | Getting hit by a vehicle or machine that did not see them                                               | Road crews, warehouses, parking lots, custodial work outdoors |
| Bike helmet                | The head and brain in a fall                     | A head injury                                                                                           | Riding a bike, skating, scooters                              |

**Part 3, what counts as a Meets answer.** The outfit does not have to match any single “right” answer. It has to be defensible, include footwear, and the reason sentence has to

name all three: weather, activity, setting. The most common failures and the correct pushes:

| Card              | The usual mistake                             | The push                                                                                                           |
|-------------------|-----------------------------------------------|--------------------------------------------------------------------------------------------------------------------|
| Job interview     | No shoes named, or sneakers with no reasoning | “What do the shoes say in this setting?”                                                                           |
| Construction site | Sneakers, shorts, no head protection          | “What is overhead? What could be dropped on a foot?” A hard hat, long pants, and closed sturdy shoes are the point |
| Wedding           | Turns into a fashion conversation             | “What does the family expect of a guest?” Then add the grass and the 84 degrees, which rules out some footwear     |
| Soccer game       | Cotton shirt for a wet game                   | This previews Lesson 5.3: a wicking fabric beats cotton here, and that is the fiber lesson coming                  |
| Cold walk         | One thick coat, no layers, no rain plan       | “Three thin layers or one thick one? Which one lets you take something off when you get inside?”                   |

**Part 4, the sort.** Most rules belong in more than one box, and saying so is the point.

| Rule               | Expected boxes                                                                                                                                                                                              |
|--------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Restaurant kitchen | Safety (non-slip shoes, jewelry in machinery), Sanitation (hair, jewelry in food), Image (the customer sees the staff)                                                                                      |
| Hospital           | Safety, Sanitation (nails and rings carry bacteria into a sterile room), Team identity (scrubs identify the role)                                                                                           |
| This school        | Answers vary by code. Most school codes are Image and Team identity, with a Safety line for shop and lab classes. Do not lead students to a verdict on this school’s code; the reasoning is the graded part |

The “what it costs” sentence earns credit for naming money, comfort, time, or self-expression. A blank or “nothing” gets one question at the desk: “What if the shoes cost sixty dollars and you only need them for work?”

**Standards checked by this handout:** NYS ATPD 1. Selection a) and b); CTE HSW 4. Classroom and Workplace Safety d); CTE CCO 1. The Work World c); NYS FACS Standard 2 (Intermediate) PI C; CDOS 3a Personal Qualities; National FCS 3.0 16.2 and 2.1.4.
