

Slides 6.10: Global Foods, One Dish, Three Cultures

Slide outline for Lesson 6.10. Twenty slides across two days: Day 1 slides 1 to 11, Day 2 slides 12 to 20. Slide 2 is read out loud and never skipped. *[Sal: every dish photo should be a real dish, not a stylized one, and every photo needs the dish name and the region under it so students see both together.]*

DAY 1

Slide 1: One Dish, Three Cultures

- Unit 6, Lesson 6.10, Day 1
- Topic 6.2 Food Preparation Methods and Science
- Today: why do so many separate cultures land on the same idea? Image: three dishes side by side, an empanada, a pierogi, and a samosa, each labeled with its name and region.

Slide 2: Our agreement on food talk

- **Curious, not disgusted.** “I have not tried that” is a sentence. “That is gross” is not
- **Ask, do not assume.** Ask the question instead of guessing the answer
- **No ranking.** No best, no worst, no “weird”
- **Nobody has to be the expert on their own background.** You may share, and you may say nothing Notes: Read all four out loud. Do not summarize and do not skip past. One “that is disgusting” in the first two minutes sets the tone for both days.

Slide 3: Do now

- Name a food you eat at home that you have never seen in a school cafeteria
- One line
- If you cannot think of one, name a food you have seen somebody else eat that you have never tried Notes: Collect four dishes on the board with **no names attached**. Never write a student’s name next to a dish.

Slide 4: Three continents, three centuries, one idea

- Dough around filling, sealed, cooked
- Nobody copied anybody
- Why does this keep happening? Image: the same three dishes from slide 1, now with a world map behind them and a line from each to its region. Notes: This is the hook.

Slide 5: Climate

- Heat, cold, rainfall, and growing season decide what can be grown
- And how food has to be preserved
- Rice needs standing water and heat
- Cold regions preserve with salt, smoke, and fermentation Image: a flooded rice paddy beside a barrel of salted fish.

Slide 6: Crops

- Whatever grows well nearby becomes the staple
- The staple shapes every meal
- Corn in Mesoamerica, wheat in Europe, rice in Asia, potatoes in the Andes, teff in Ethiopia, cassava in West Africa Image: six staple crops in six small photos, labeled.

Slide 7: Trade

- Ingredients moved along routes and rewrote whole cuisines
 - Chilies went from the Americas to Asia and Africa after 1500
 - Tomatoes went from the Americas to Italy
 - Black pepper went from India to Europe Image: a world map with four labeled arrows.
- Notes: This is the slide that breaks the idea of a pure traditional cuisine, and it is worth thirty extra seconds.

Slide 8: Migration

- People carry recipes and adapt them to what the new place sells
- Red beans and rice in Louisiana carries West African cooking into a Gulf pantry
- Pizza in New York is not pizza in Naples Image: two versions of the same dish side by side, home country and new country.

Slide 9: Religion

- Permitted and forbidden foods
 - Fasting days and feast dishes
 - Halal and kosher rules on meat, Lent and Ramadan fasting, vegetarian practice in Hindu, Jain, and Buddhist traditions
- Notes: Factual, brief, no commentary. This is one of the five factors and it gets the same thirty seconds as the other four.

Slide 10: The pattern, three ways

- All three: dough plus filling, sealed, cooked
- The dough differs in how it is made and rolled
- The filling is whatever is local and affordable
- The method differs: fried, boiled, fried or baked
- Which factor explains each difference? Notes: Model the comparison out loud so the format is demonstrated before students do it alone. Students fill the first row of the comparison page from your example.

Slide 11: Your research card

- Pick your form and your three cultures
- One dish per person
- Five boxes: region, ingredients, method, **why here**, one surprise
- Two sources, one from the library or a reference source
- “Because it is their tradition” does not answer box 4 Notes: Push on box 4 while you circulate. It is the box students skip. Exit card: “The factor that explains my dish best is ___ because ___.”

DAY 2

Slide 12: Present and Compare

- Unit 6, Lesson 6.10, Day 2
- Ninety seconds each
- Three versions of the same idea, back to back Image: three flatbreads side by side, a pita, a roti, and a tortilla, each labeled.

Slide 13: Do now

- Read your research card
- Write the one fact on it that will surprise the class Notes: Thirty seconds.

Slide 14: Our agreement, again

- Curious, not disgusted
- Ask, do not assume
- No ranking
- Nobody has to be the expert on their own background Notes: Up before the first presentation. One question per group from the class, and every question has to follow the agreement.

Slide 15: Your ninety seconds, in order

1. My dish is ___ from ___
2. The main ingredients are ___
3. It is cooked by ___
4. It exists there because ___
5. The thing that surprised me is ___ Notes: Visible timer. Run the presentations in rounds by form so the class hears three versions of the same form together.

Slide 16: Same, different, why

- What is the same across all three?
- What is different?
- Why? Name at least two of the five factors Notes: Write the “same” and “different” points on the board as they come out of the presentations. Push any answer that says “because that is their culture” back to a factor.

Slide 17: A better question

- Not: “do you actually eat that?”
- Better: “what does it taste like?”
- Not: “why is it like that?”
- Better: “what grows there?” Notes: If a question misses the agreement, rephrase it in front of the room, kindly and immediately, and move on.

Slide 18: The tasting, if we are doing it

- Store bought, packaged, labeled
- Every ingredient panel is taped beside its plate
- One piece each, own napkin, no double dipping
- A no-taste seat is always available and no reason is required Notes: If one student in the room cannot safely eat any of the three, the tasting does not run and Day 2 is presentations plus the written comparison, which is the default version. Say that decision out loud without naming anybody.

Slide 19: If we are not tasting

- The extension: pick a fourth everyday form that shows up in three cultures
- Name the form and the three versions
- One ingredient that makes each one local
- One sentence: why does this form show up everywhere? Notes: This replaces the tasting with no loss to any objective.

Slide 20: Closing round

- One sentence per group: the thing you will remember
- Then: one thing I would try, and one question I still have Notes: Keep the round to the agreement. Collect every comparison page at the door. If the tasting ran, keep the packages; the ingredient panels are a free Unit 1 label lesson.
